

## THE CLIENT

Noumed Life Sciences – a newly formed UK-based Pharmaceutical manufacturing company producing generic drugs on a large scale that serve a wide range of therapeutics for the world-wide market. Additionally providing a variety of services from IP Licensing to Contract Manufacturing to R&D.

## THE BRIEF

After successfully delivering a suite of cleanrooms for the owner of a generic Pharmaceuticals company, we were commissioned to design and construct a large scale manufacturing facility for his new UK generics brand. Phase one of this project was the construction of a QC Lab to house the research and development activities and the testing of product batches.

**“As good a facility as the inspector has been in...”**

“I’m happy to inform you that our MHRA inspection went very well. The site passed its inspection for packaging, warehouse and QC testing. We expect to receive formal certification soon.

“One of the notes made by the inspector was that this was as good a facility as he has been in, which is indicative of your team’s hard work and quality of work.

“For that I would like to thank you both and your teams. It only means that the standard has been set high for our next project together which will be in the very near future.”
